1. Biosimilar Industry Analysis

1.1 What is the Biosimilar Industry

1.2 Biosimilar Clinical Process

1.3 Key Biosimilar Competitors

2. Company Overview

2.1 Corporate Governance

2.2 Celltrion Introduction

2.3 Celltrion Key Financial Indicators

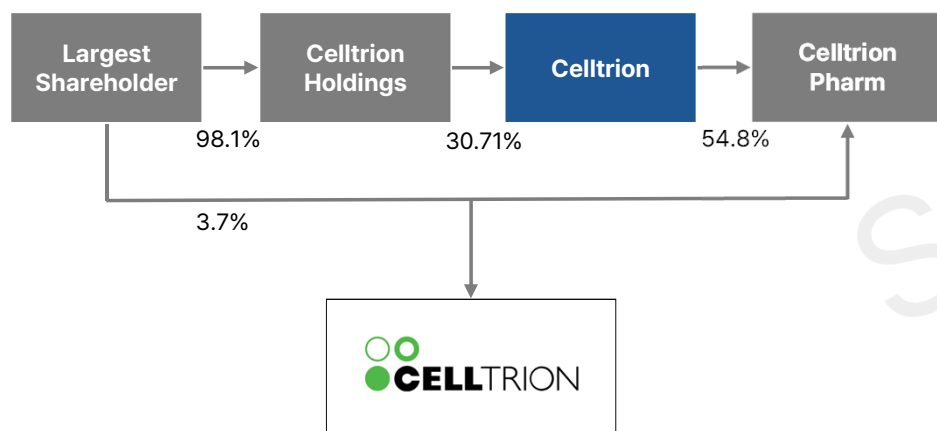

2.4 Understanding Celltrion's Product Portfolio

2.5 Celltrion Investment Attractiveness

2.1 Corporate Governance

Corporate Governance

Corporate Governance Structure

- Celltrion Holdings, the holding company, controls Celltrion as its largest shareholder
- Securing a sales channel through significant ownership in subsidiary Celltrion Pharm

Detailed Shareholder (As of Dec 31, 2025)

Shareholder	Shares	Ownership(%)
Celltrion Holdings	70,922,406	30.71%
National Pension Service	15,416,445	6.67%
Individuals	74,810,551	32.39%
Foreign Institutions	39,638,383	17.16%
Domestic Institutions	17,790,923	7.70%
Treasury Shares	12,347,845	5.35%
Total	230,960,969	100.0%

Detailed Shareholder Composition

- Demonstrating the Company's cash flow generation ability and stability, supported by National Pension Service as the second-largest shareholder
- High float ratio dilutes share price volatility risk

Source : Company data

Note :

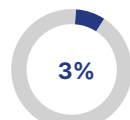

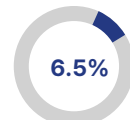

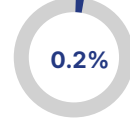

2.2 Celltrion Introduction

Celltrion is a pharmaceutical company established in 2002. With 36 overseas subsidiaries, it holds approximately 8%⁽¹⁾ of the global biosimilar market, standing as a leading global integrated pharmaceutical company

Category

Date of Establishment	- February 26, 2002 - Biological pharmaceutical manufacturer in South Korea
Main Business	- Biosimilar Division (Global 3rd in revenue scale) - Bio Novel Drug Division - Chemical Drug Division - CDMO and Other Divisions
Production Facilities⁽²⁾	- Songdo Plant 1 - Songdo Plant 2 - Songdo Plant 3 - US Blanchburg Plant - Songdo Plant 4 - Songdo Plant 5
Global Network⁽³⁾ (2025)	36 overseas subsidiaries 14 overseas manufacturing sites
Number of Employees (End of December 2024)	2,901
Key Financial Indicators⁽⁴⁾	- Revenue : USD 2.83 billion(2025) - EBITDA : USD 1.26 billion(44.4%) - Net Debt : USD 1.67 billion

Business Division Overview(2025)

Division	Overview	Revenue Share	Regional Share
Biosimilar Division	- Replica drugs with equivalent quality, safety, and efficacy to original biopharmaceuticals - Approved product : 11 - Pipeline : 4		
Bio Novel Drug Division	- Novel biopharmaceuticals developed using biotechnology with new mechanisms of action. - Approved product : 2 - Pipeline : 2		
Chemical Drug Division⁽⁴⁾	- Traditional drugs with low-molecular structures manufactured through chemical synthesis - Approved product : 4 - Pipeline : 1		
CDMO and Other Division⁽⁵⁾	Contract services covering the entire process from drug		

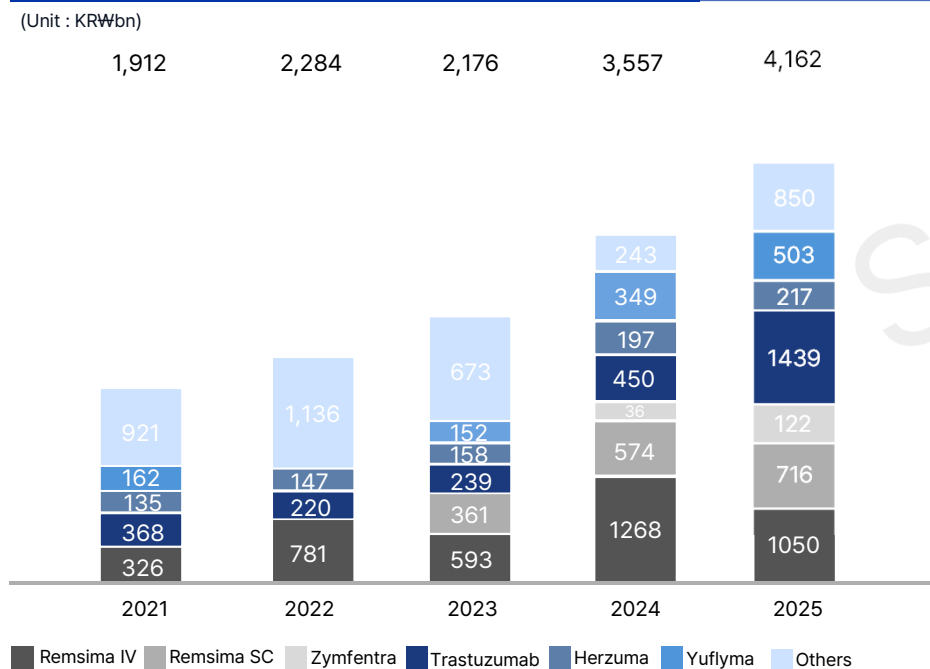

Source : Company data

Note :
 (1) Global biosimilar market size in 2025 was approximately USD 35bn
 (2) Songdo Plants 4 and 5 are expansion facilities scheduled for completion in 2030
 (3) Total of 36 subsidiaries: Europe (19), Asia (8), North America (2), Latin America (5), Oceania (2)
 (4) Revenue and EBITDA are on a consolidated basis for 2025. Net debt is based on the 2025 annual report and consolidated financial statements (DART)
 (5) Geographic mix per segment is substituted with overseas revenue as a proportion of total revenue (DART)

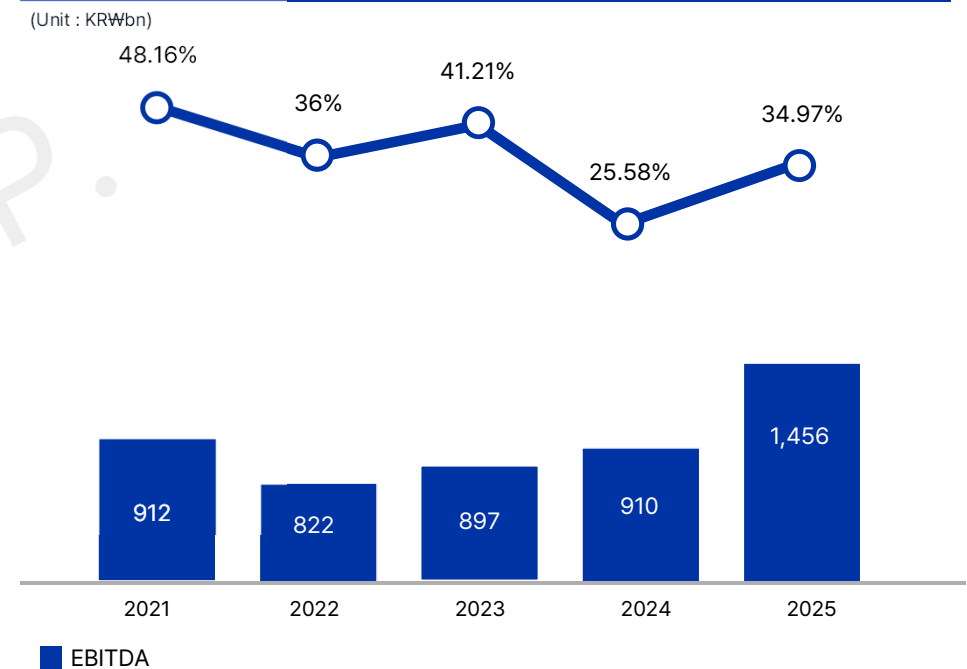

2.3 Celltrion Key Financial Metrics

Revenue mix improvement driven by new products such as Truxima and Yuflyma continues to support top-line growth, while the elimination of merger-related one-off costs has put EBITDA margin on a recovery trajectory.

Revenue by Product

EBITDA

Note :

2.4 Celltrion Oncology Portfolio- key products & market size

While the top 3 oncology markets project steady growth, topline growth continues as market share for Herzuma, Truxima, and Vegzelma expands across key markets.

Global Oncology Market Trends by Major Ingredient

Herzuma

- Recording steady sales based on 70% market share in Japan and 100% in New Zealand.
- Driven by the continuous success of Celltrion's Japanese and New Zealand subsidiaries in winning government tenders through effective communication with procurement agencies.

Truxima

- Maintaining a market share in the 30% range in both the U.S. and Europe.
- As the Rituximab market is expected to grow 15.4% annually, maintaining a steady share is projected to drive the company's revenue growth.

Vegzelma

- Ranked #1 in the European Bevacizumab market with a 29% share as of Q3 2025.
- Showing the steepest growth within the company's oncology portfolio, reaching 58% share in Japan and 81% in New Zealand.

Source : Healthchosun, market research

Note :

2.4 Celltrion Oncology Portfolio (continued)

Celltrion possesses three oncology biosimilars—Herzuma, Truxima, and Vegzelma—and has secured a balanced oncology portfolio across major indications including breast cancer, hematologic cancer, and lung cancer.

Oncology Biosimilar Portfolio

Product	1 Herzuma	2 Truxima	3 Veazelma
Reference Product	Herceptin	Mabthera	Avastin
Active Ingredient	Trastuzumab	Rituximab	Bevacizumab
Patent Expiry	US : 2019 EU : 2014	US : 2016 EU : 2013	US : 2022 EU : 2019
Indication	Breast cancer Stomach cancer	Leukemia Rheumatoid	Breast cancer Non small cell lung cancer
Description	- A monoclonal antibody targeting the Her2 antigen - Cutting off cell proliferation and survival signal	- A monoclonal antibody targeting the CD20 antigen - Getting rid of the B cell	- A monoclonal antibody targeting the VEGF-A antigen - Angiogenesis inhibitor
% of Revenue	 5%	 14%	 10%

Note :

2.4 Celltrion Autoimmune Portfolio – Key Products and market size

Core biosimilars maintain robust growth while new product launches expand the autoimmune portfolio, Early commercial traction from Steqeyma and Avtozma reinforces the division's growth outlook

Global Market Size Trends by Key Autoimmune Therapeutic Ingredient

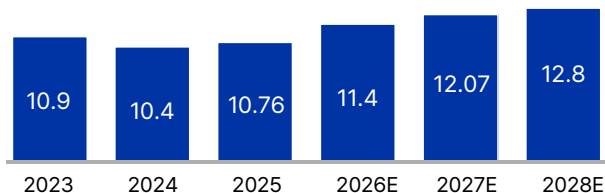

Global Infliximab Market

(Unit : US\$bn)

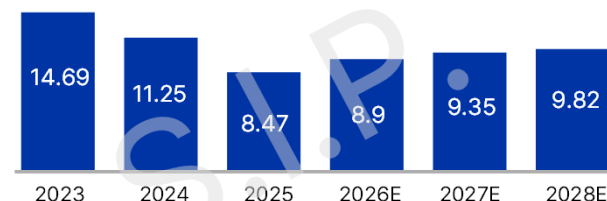

Global Ustekinumab Market

(Unit : US\$bn)

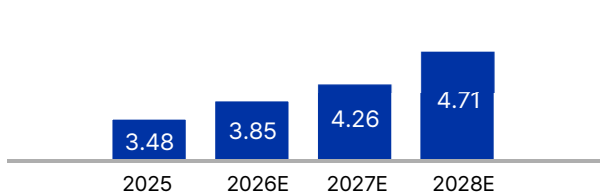

Global Adalimumab Market

(Unit : US\$bn)

Global Tocilizumab Market

(Unit : US\$bn)

Remsima(IV)

- Highest market share, ranked No. 1
- First launch of a "liquid formulation" from the existing "lyophilized formulation" as of February 2026

Remsima(SC) & Zymfentra

- Successfully commercialized the world's first infliximab SC "Remsima SC / Zymfentra"
- Patent technology protected until 2040
- 2025 global revenue exceeded USD 544 billion (YoY +40%)
- Continues to generate new demand within the infliximab market

Yuflyma

- 2025 global revenue exceeded approximately USD 340 million (YoY +40%)
- Growth momentum expected to continue with expansion of Low-WAC sales in the US in 2026

Steqeyma

- Immediately upon launch, secured bids in major countries and confirmed early tangible results such as inclusion in major PBM formularies

Avtozma

- Immediately upon European launch, secured public procurement bids from French private hospital groups and Spain
- US PBM listing process currently underway

Source : Company data, Research Report

Note :

2.4 Celltrion Autoimmune Portfolio (continued)

The Remsima family drives approximately 47% of revenue across 6 autoimmune biosimilars

Autoimmune Biosimilar Portfolio

Product	1 Remsima	2 Remsima SC	3 Zymfentra	4 Yuflyma	5 Steqeyma	6 Avtozma
Reference Product	Remicade	Remicade	Remicade	Humira	Stelara	Actemra
Active Ingredient	Infliximab	Infliximab	Infliximab	Adalimumab	Ustekinumab	Tocilizumab
Patent Expiry	US : 2018. 09 EU : 2015. 02	US : 2018. 09 EU : 2015. 02	US : 2018. 09 EU : 2015. 02	US : 2016.12 EU : 2018.10	US : 2023.09 EU : 2024.07	US : 2015.12 EU : 2017.04
Indication	Crohn's disease Ulcerative colitis	Crohn's disease Ulcerative colitis	Crohn's disease Ulcerative colitis	Rheumatoid arthritis Inflammatory bowel disease	Psoriasis-Inflammatory bowel disease	Rheumatoid arthritis Systemic juvenile idiopathic arthritis
Description	■ Binds TNF-α on cell surfaces before inflammation begins, blocking inflammation ■ Reduces excessive TNF-α activity, providing immunosuppressive effects	■ Subcutaneous (SC) injection formulation of Remsima	■ Remsima SC was re-approved as a new drug for US market entry, implementing pricing and distribution strategies tailored to the PBM-centric Pharmacy Benefit market.	■ Targets TNF-α via p55/p75 TNF receptors, blocking receptor interaction ■ Treats inflammatory diseases caused by abnormal immune responses	■ Targets the shared p40 subunit of IL-12 and IL-23 ■ Modulates excessive immune and inflammatory responses in T cells and other immune cells	■ Blocks IL-6 inflammatory cytokine activity ■ Targets hepatocytes, activated plasma cells, B cells, T cells, and monocytes to regulate inflammation
% of Revenue	 27%	 19%	 3%	 13%	 3%	 0.5%

Note :

2.4 Celltrion Other Disease Portfolio – Key Products & Market Size

Portfolio diversification underway with sequential rollout of Stoboclo, Osenvelt, and Eyedenzelt.

Global Market Size Trend by Key Molecule in Other Disease Therapeutics

Stoboclo & Osenvelt

- Launched in Europe (Dec 2025) and the U.S. (Jul 2025)
- Exclusive preferred-drug listing on one of the top 3 U.S. PBM formularies

Omlyclo

- The first FDA-designated interchangeable biosimilar referencing Xolair, allowing pharmacists to substitute the prescription without physician confirmation
- Sales expected to ramp up from 2026 onward, driven by full-scale commercialization in the U.S.

Eyedenzelt

- Expected to accelerate entry into major global markets in 2027, following the expiration of Eylea's key formulation patents

Source : Yuanta Securities Research Report, Media releases, Company materials

Note :

2.4 Celltrion Other Disease Area Portfolio (Cont'd)

Celltrion holds a portfolio of 4 biosimilars spanning diverse indications including osteoporosis, asthma, and macular degeneration.

Other Key Biosimilar Portfolio

Product	1 Stoboclo	2 Osenvelt	3 Omlyclo	4 Eyedenzelt
Reference Product	Prolia	Prolia	Xolair	Eylea
Active Ingredient	Denosumab	Denosumab	Omalizumab	Aflibercept
Patent Expiry	US : 2025. 2 EU : 2025. 11	US : 2025. 2 EU : 2025. 11	US : 2025. 11 EU : 2024. 03	EU : 2023. 11
Indication	Osteoporosis	Cancer-related Bone Disease	Allergic AsthmaChronic Idiopathic UrticariaChronic Rhinosinusitis	Wet Age-related Macular DegenerationVarious Macular Edema
Description	- RANKL acts as a signal activating osteoclasts; upon binding to its receptor, osteoclasts are activated leading to bone resorption - Denosumab binds RANKL first, inhibiting osteoclasts and preventing bone resorption, ultimately increasing bone mineral density and reducing fracture risk	- RANKL acts as a signal that activates osteoclasts; binding to its receptor triggers osteoclast activation and bone resorption - Denosumab binds RANKL first, inhibiting osteoclasts and preventing bone resorption, ultimately increasing bone mineral density and reducing fracture risk	- Reduces IgE concentration through specific binding to allergy-triggering IgE - Attenuation of allergic responses through reduction in circulating IgE levels - Inhibition of IgE production feedback loop	- Specific binding to VEGF-A and PlGF, proteins involved in pathological angiogenesis - Blocking signal transduction to angiogenic receptors, reducing pathological neovascularization
% of Revenue	 3% ⁽¹⁾	 3% ⁽¹⁾	 3%	 0.2%

2.5 Celltrion Investment Attractiveness

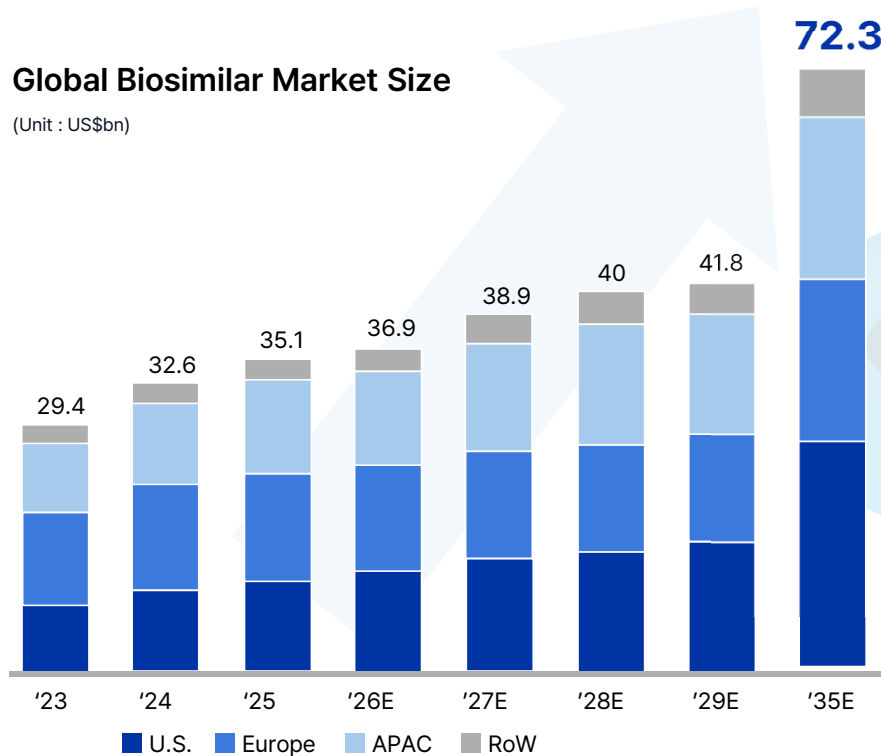

Celltrion, The Key Beneficiary of Global Macro Shifts

The global biosimilar market is poised for sustained growth via policy, supply chain, and regulatory tailwinds with Celltrion as the primary beneficiary

Global Biosimilar Market Size

(Unit : US\$bn)

US Government Drug Pricing&PBM⁽¹⁾ Reform

- US Consolidated Appropriations Act (CAA)⁽²⁾ enacted
- De-linking PBM compensation structure and ensuring market transparency
- "Big Patient" approach where drug prices are lowered through market competition

Geopolitical Restructuring of Global Bio Supply Chain

- US BIOSECURE Act⁽³⁾ enacted
- Triggering shift of global bio production bases
- Geopolitical leverage to increase global market share

Advanced Regulatory Guideline

- Conditional waiver of Phase 3 comparative efficacy studies (CES)⁽⁴⁾
- Elimination of 3-arm PK bridging studies⁽⁵⁾
- Simplified interchangeability testing

Source : Korea Bio Association

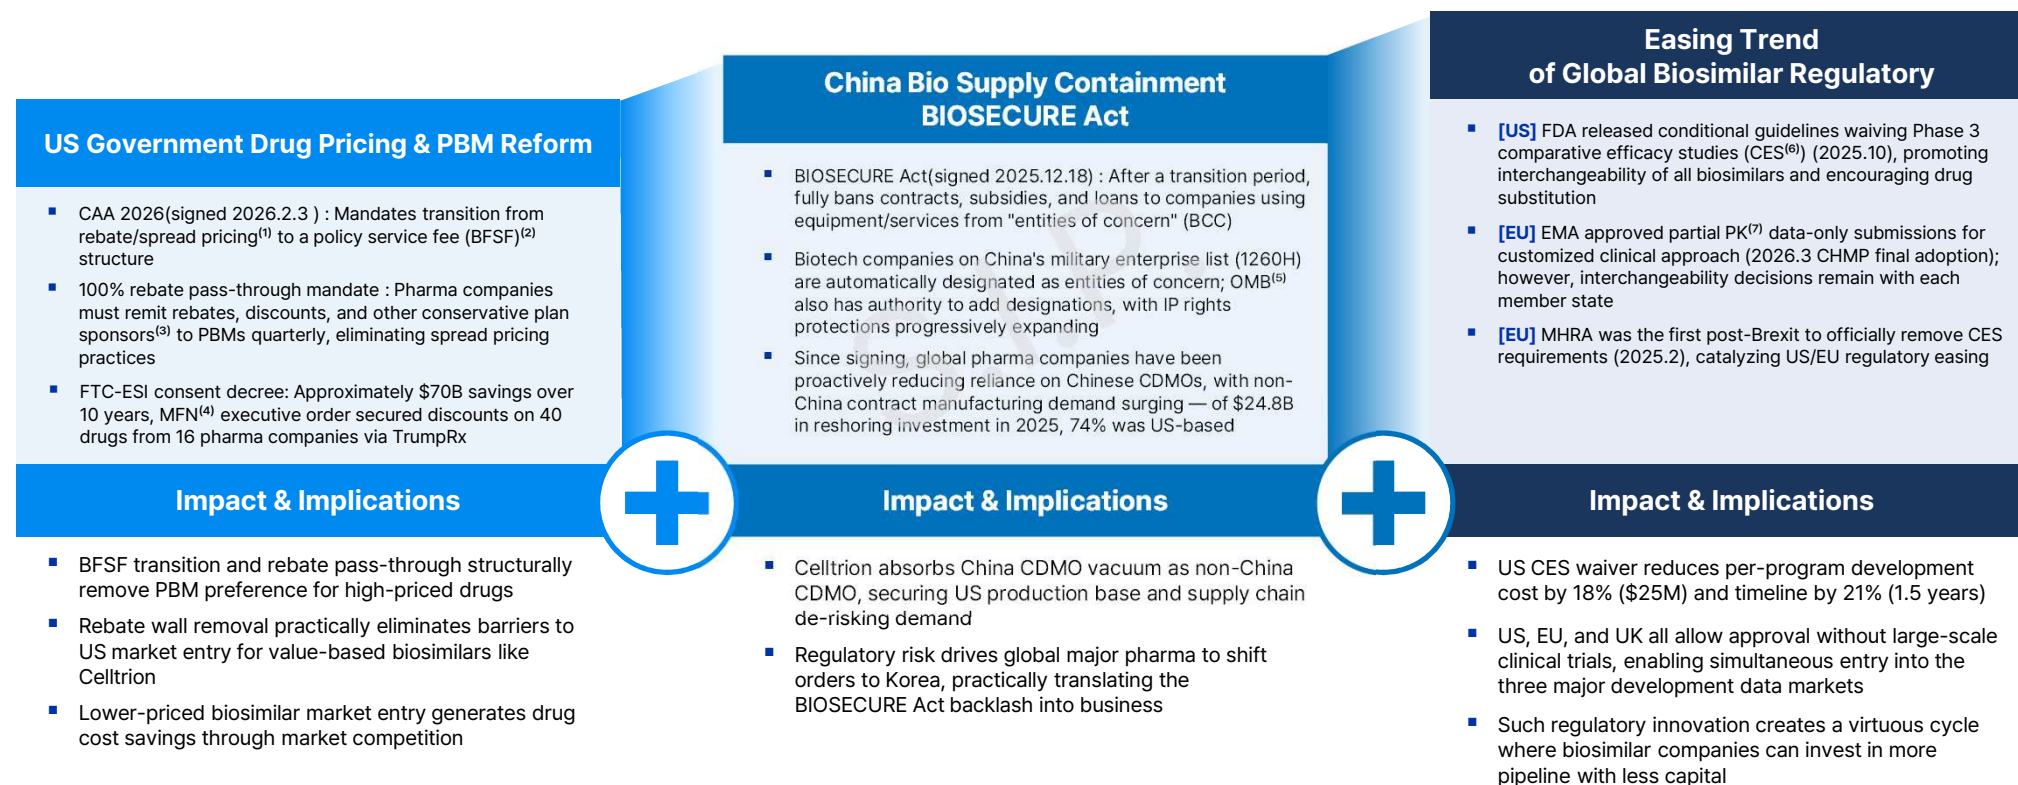

Note : (1) Abbreviation for Pharmacy Benefit Manager; intermediary between insurers and pharmaceutical companies in the US drug supply chain (e.g., CVS Caremark, Express Scripts)

(2) Consolidated Appropriations Act: US federal law mandating greater transparency in PBM rebate practices and requiring drug price savings to pass through to patients

(3) BIOSECURE Act: US federal legislation restricting transactions with Chinese biotech companies to reduce dependence on Chinese CDMOs in the US pharmaceutical and biotech supply chain

(4) CES (Comparative Efficacy Study): Phase 3 clinical trial conducted to demonstrate equivalent efficacy and safety of a biosimilar relative to the reference product (5) Clinical trial comparing pharmacokinetic (PK) equivalence between the reference product (EU-US) and 3 biosimilar products to establish a bridging basis for global regulatory submissions

Three structural macro shifts create a favorable environment positioning Celltrion as a key beneficiary

Source : FTC.gov, KFF, CAA 2026(H.R.7148), White House Fact Sheet, Mintz PBM Update, FY2026 NDAA §851, Akin/Latham BIOSECURE Analysis(2025.12)

Note : (1) Practice whereby PBMs retain the spread between amounts paid to pharmacies and amounts billed to insurers
 (2) BFSF (Bona Fide Service Fee): fixed fee based on fair market value, designated under CAA 2026 as the sole legitimate form of PBM compensation
 (3) Employers such as large corporations and government entities that provide health insurance to employees and bear the associated costs

(4) MFN (Most-Favored-Nation): policy aligning US drug prices with the lowest prices paid by other developed nations

(5) Abbreviation for Pharmacokinetics, which quantitatively measures how a drug moves through the body

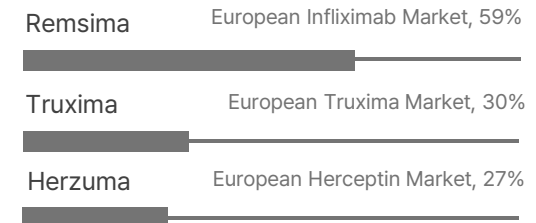

(6) CES (Comparative Efficacy Study): Phase 3 clinical trial conducted to demonstrate equivalent efficacy and safety of a biosimilar relative to the reference product

(7) OMB (Office of Management and Budget): US federal office responsible for overseeing the federal budget

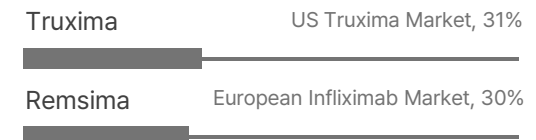

Celltrion continues to build and expand its distribution network anchored in key markets, broadening patient access to treatment.

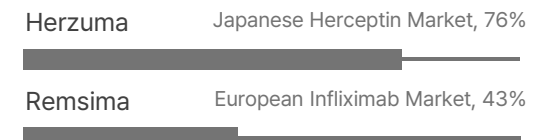

Europe Market Share

US Market Share

Japan Market Share

Source : Medifonews, DART

Note :

Scaling in-house capacity to strengthen global supply

Expansion of CAPA 55% in U.S. and Korea production base by 2031, removes tariff and supply chain risks

Branchburg, NJ, USA

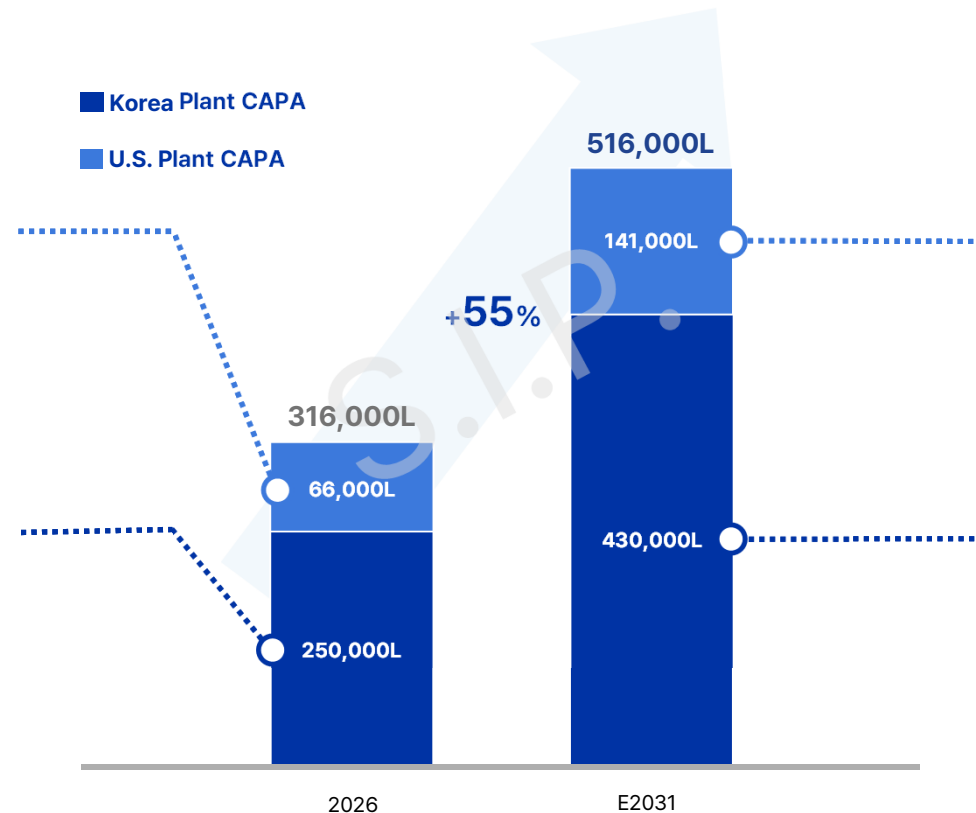

CAPA: 66,000L

- Structural elimination of tariff risk via local U.S. production-and-supply
- Cost cut of U.S. market supply through local workforce succession and logistics savings
- Rapid supply-chain build-out by acquisition

Songdo Plants 1 / 2 / 3

CAPA: 250,000L

- Asia's first FDA cGMP⁽¹⁾-certified plant (Plant 1)
- Integrated DS-DP production capability (Plant 2)
- Maximum production efficiency via multi-product / small-batch and high-titer technology (Plant 3)

U.S. +75,000L Expansion

Estimated CAPA: 141,000L

- CAPA uplift from 6 additional bioreactors
- Meeting demand from expanding U.S. product pipeline
- Positioned to capture growing CMO demand

Korea +180,000L Expansion

Estimated CAPA: 430,000L

- 100% in-house DS⁽²⁾ production by constructing Songdo Plants 4 / 5, Yesan DP⁽³⁾ plant
- Songdo to benefit from cutting-edge automation, boosting production efficiency
- Yesan expected to achieve 90%+ vertical integration

Source : Celltrion disclosures, media releases

Note : (1) Current Good Manufacturing Practice: enhanced pharmaceutical manufacturing and quality-control standards
 (2) Drug Substance, i.e. specific component of a medicine that provides the intended pharmacological activity
 (3) Drug Product, i.e. finished pharmaceutical ready for patient administration

Market entry Acceleration of Celltrion's biosimilars by Patent expirations

The upcoming patent expirations of numerous blockbuster drugs mean that our biosimilars have many markets to enter going forward, ultimately representing virtually limitless growth potential.

Blockbuster Drug (Company)	Patent Expiry (US)	Patent Expiry (EU)	25' Revenue(USD Bn)	Celltrion's Biosimilar

Note :

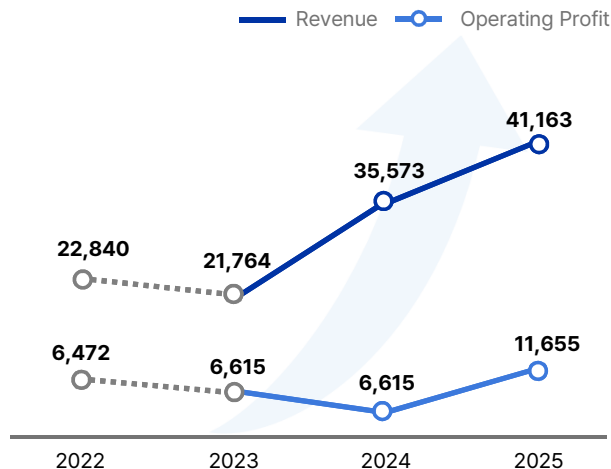

Healthy Financial Structure with Record-High Performance

With record-high revenue, below-peer debt ratio, and robust cash generation, Celltrion has entered a phase of simultaneous qualitative and quantitative growth.

Consistent Revenue Growth with Record-High Performance

Celltrion Revenue and Operating Profit Trend, 2022–2025

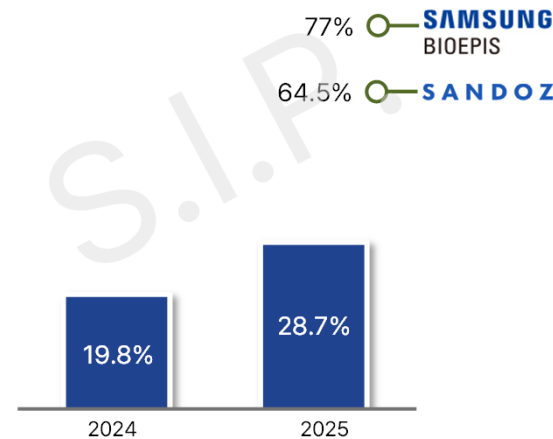

Record-High Revenue

Structural profitability improvement driven by higher-margin new product mix

Healthy Financial Structure for Future Growth

Celltrion vs Global Peers D/E Ratio

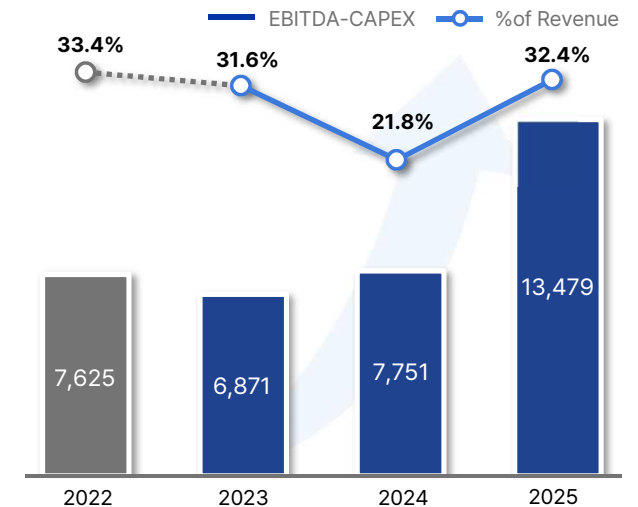

Low leverage maintained through capital strengthening post-merger

Significantly lower leverage ratio compared to industry peers

Robust Cash Generation

(EBITDA-CAPEX) (Unit : KRW\$bn)

Consistently growing cash flow post-merger

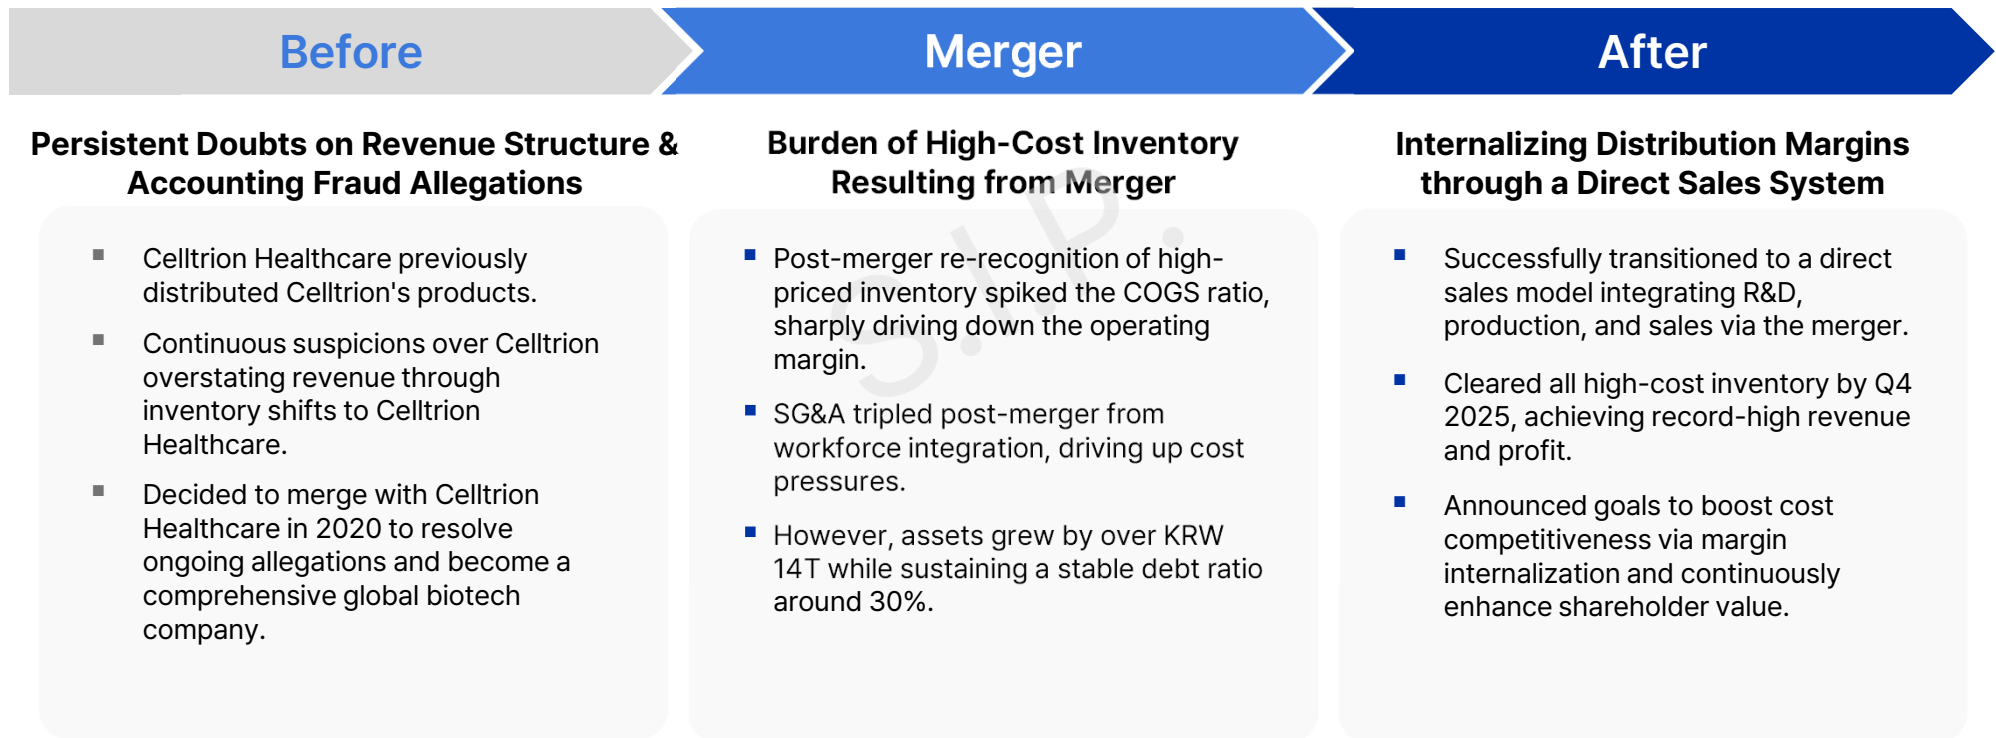

Ongoing financial structure improvement expected

Source : DART

Note :

Effects of Celltrion Healthcare Integration

Secured revenue transparency via the merger, normalized profitability after clearing high-cost inventory, and successfully transitioned to direct sales.

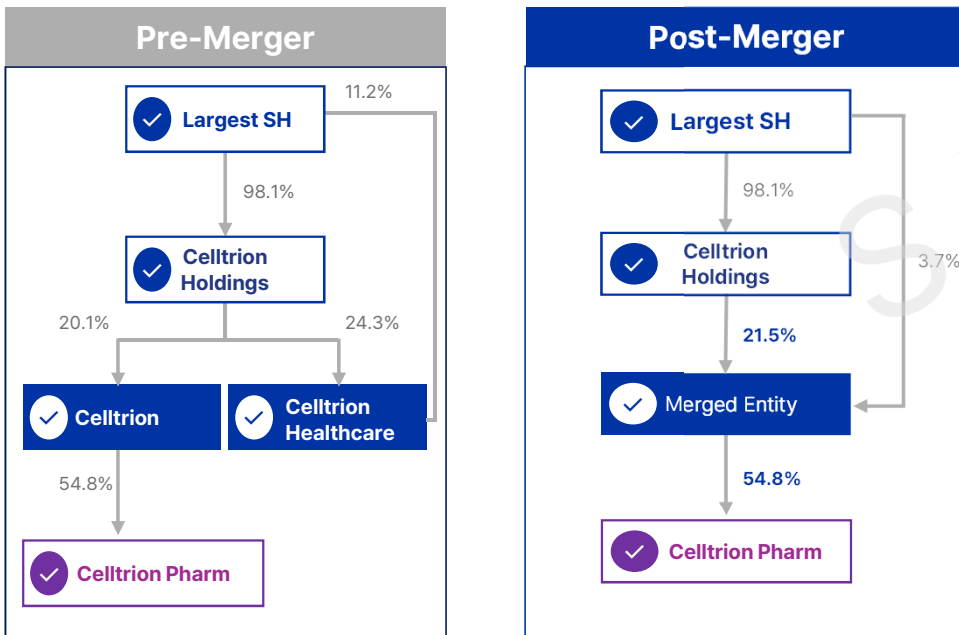

Source : Company IR

Note :

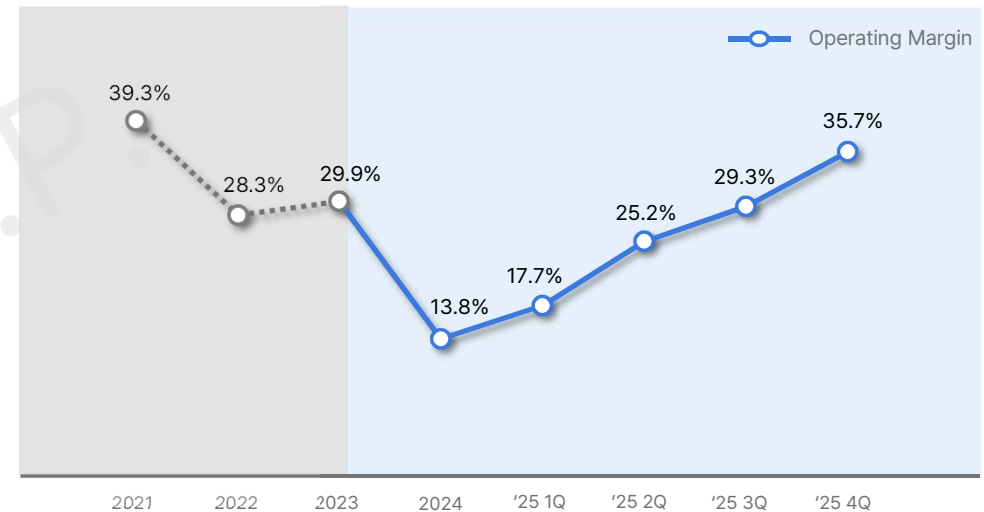

Operating Margin Trends & Post-Merger Governance Restructuring

Unified governance from the merger enhances operational efficiency, while rising post-merger operating margins demonstrate financial improvement and secure future profitability.

Pre- and Post-Merger Governance Structure

Celltrion Operating Margin Trends

- 2025 operating margin shows steady QoQ growth, sustaining a profitability improvement trend.
- The 2024 margin decline was driven by rising costs and one-off expenses, deemed temporary

Source : Company IR

Note :

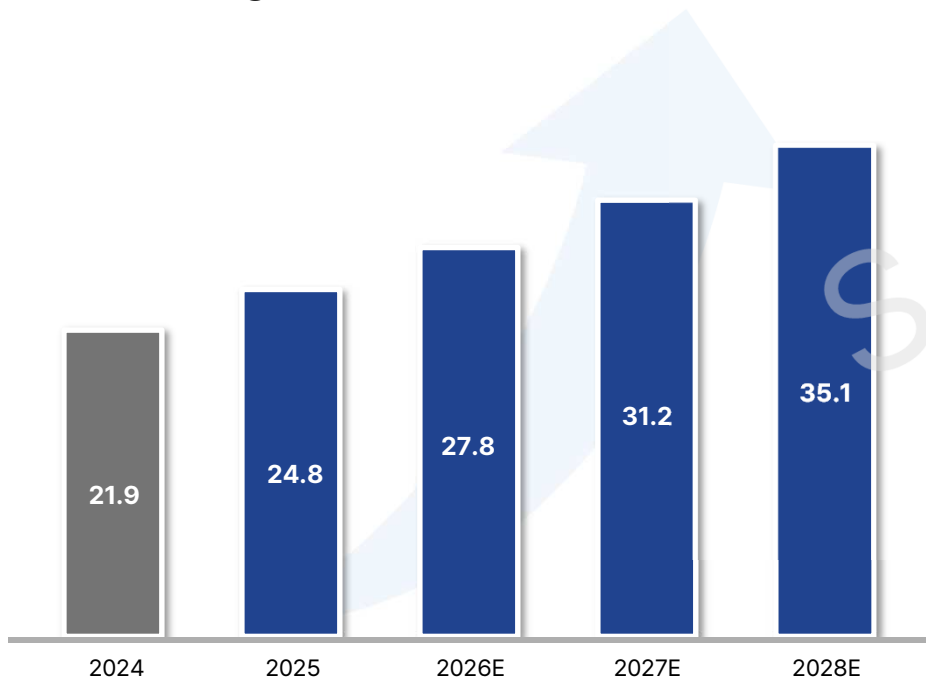

7 CDMO Entry & New Drug Development for Future Growth

What is CDMO?

Entering the global CDMO market (12% expected CAGR) via US facility acquisition, diversifying beyond a biosimilar-only model.

Global Biologics CDMO Market Size (Unit : US\$bn)

What is CDMO?

- integrated model of Contract Development (CDO) and Manufacturing (CMO)
- CDO : Outsourced drug development (e.g., cell line, process development).
- CMO: Outsourced production and supply of developed drugs.

Acquisition of US Branchburg Facility

- Current single business model: 95% revenue from biosimilars.
- Established 'Celltrion Bio Solutions' and acquired Eli Lilly's Branchburg, NJ drug substance facility to enter the CDMO business.
- Fully operational facility; ready for immediate use upon acquisition

CDMO Market Outlook

- Global biologics CDMO market projected to grow at a **12.3% CAGR**

Secured CDMO Contracts

- KRW 678.7B CMO contract with Eli Lilly
- KRW 294.9B CMO contract with an undisclosed global pharma.
- Cumulative CMO backlog exceeded KRW 1T in Q1 2026.

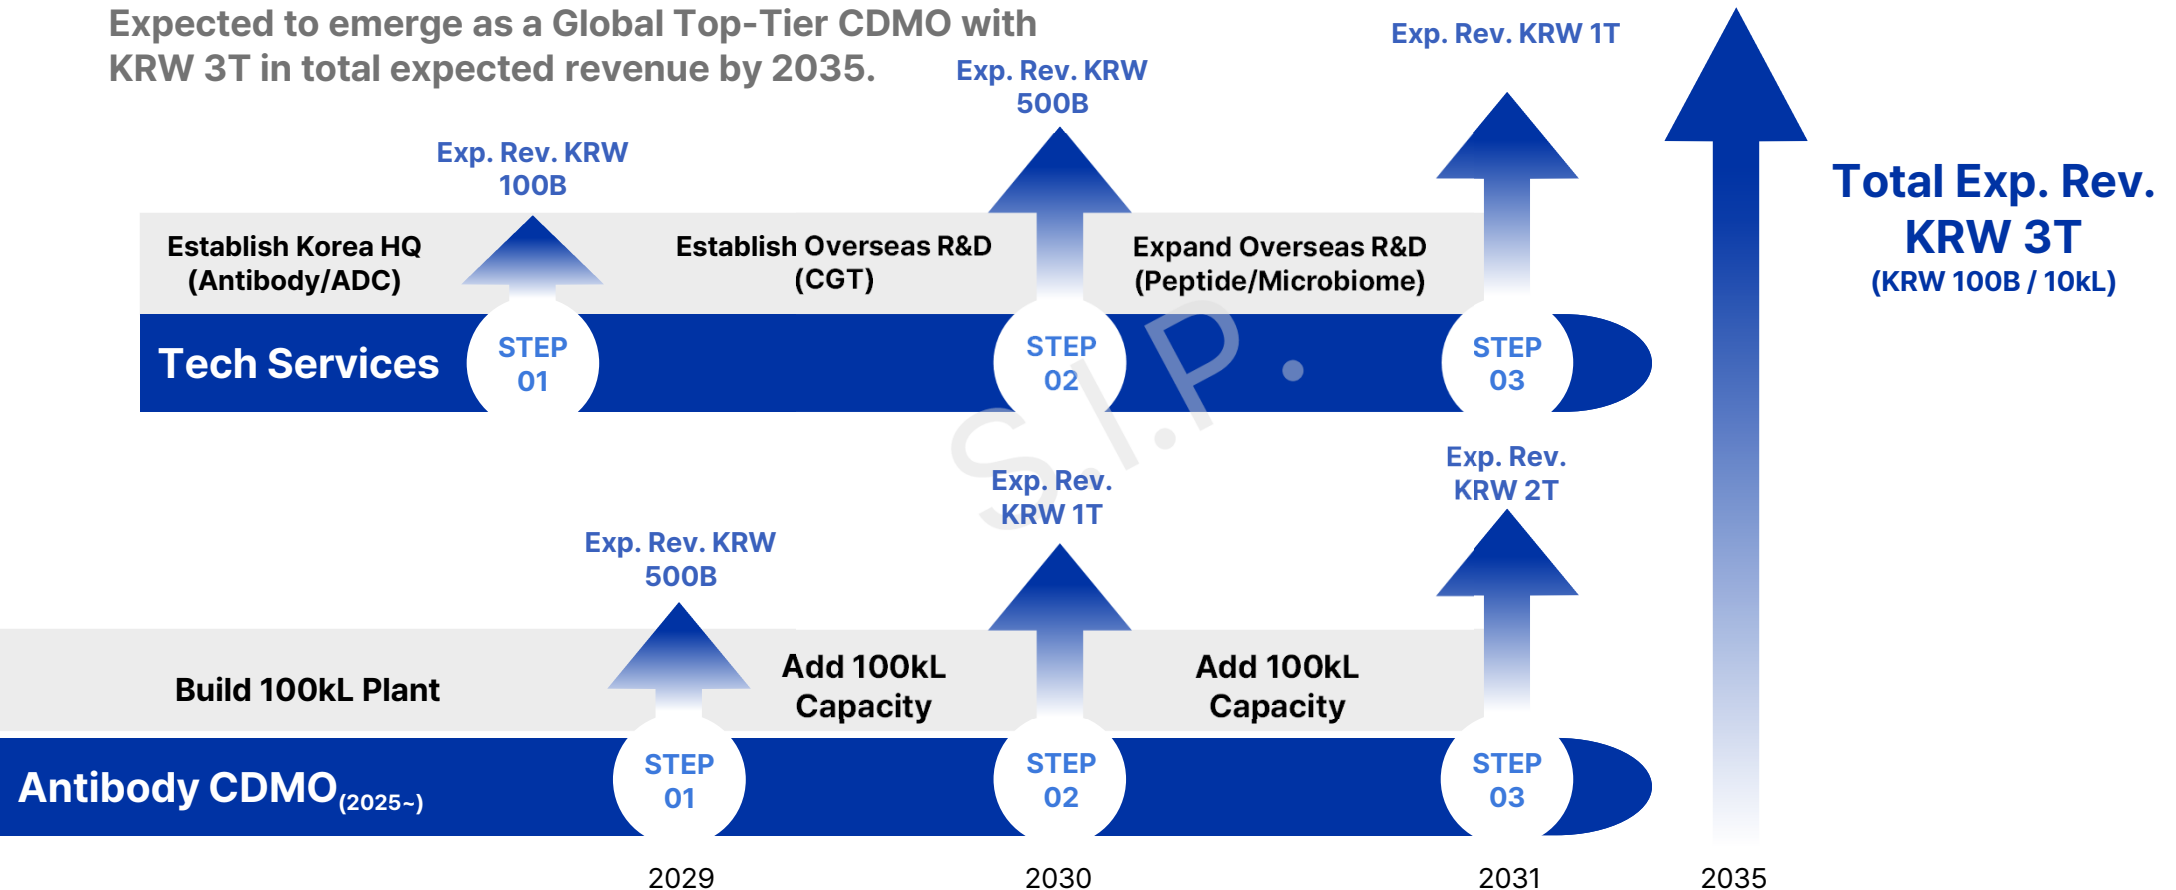

Source : Seoul Finance, Korea Bio Association, Company IR

Note :

Celltrion Bio Solutions Roadmap

Expected to emerge as a Global Top-Tier CDMO with KRW 3T in total expected revenue by 2035.

Source : Medifonews

Note :

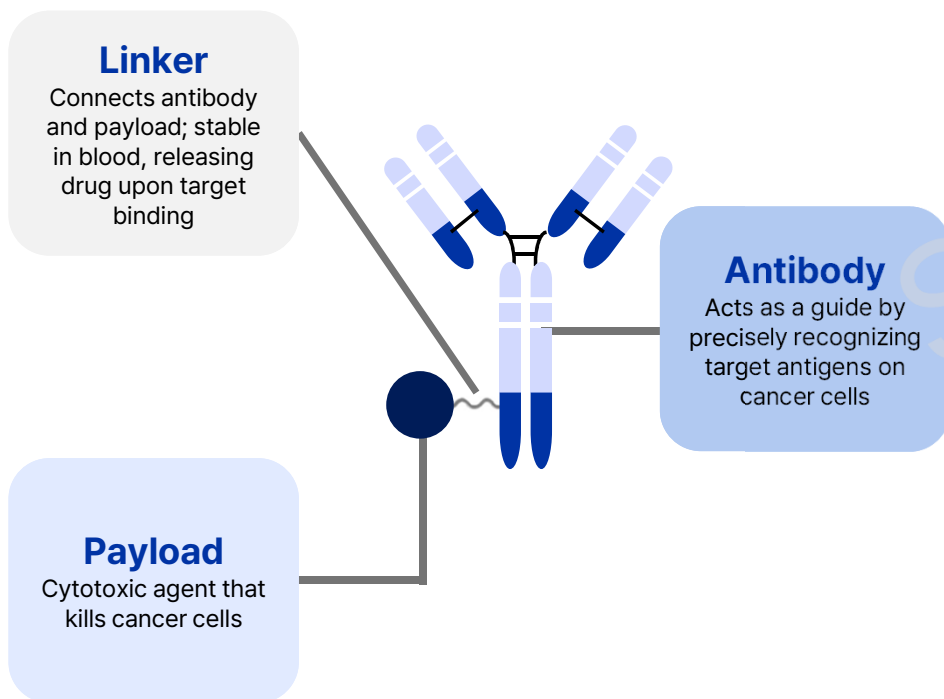

7 CDMO Entry & New Drug Development for Future Growth

What is ADC?

ADCs provide superior efficacy and fewer side effects than conventional therapies through precision targeting.

Antibody Drug Conjugates

Comparison : Conventional Chemotherapy vs. ADC

	Conventional	ADC
Mechanism	Systemic action; damages both cancer and healthy cells	Target-selective drug delivery via antibodies
Structure	Acts as a standalone agent	Conjugation of Antibody + Linker + Payload
Efficacy	Cancer cell eradication	Concentrated delivery; high efficacy at low doses
Side Effects	Frequent due to healthy cell damage	Minimized through selective targeting
Key Features	End-to-end outsourcing (R&D to Mfg)	Enhanced efficacy via ADC platform

Source : Wide Economy
Note :

Key New Drug Pipelines & Celltrion's Differentiators

Focused on developing new drugs, including ADCs, to emerge as a global big pharma.

Project	Indication	Mechanism of Action	Product Profile
CT-P70	NSCLC (Non-Small Cell Lung Cancer)	Targets cMET (growth factor receptor) that promotes tumor growth	- ADC-based oncology drug - FDA Fast Track designation
CT-P71	Urothelial Carcinoma	Targets Nectin-4 activated in cancer cells	ADC-based oncology drug
CT-P73	Cervical Cancer	Targets Tissue Factor activated in cancer cells	ADC-based oncology drug
CT-P72	Gastric Cancer	Targets HER2 x CD3 activated in cancer cells	Bispecific antibody-based oncology drug
CT-P77	Autoimmune Disease	Selectively inhibits FcRn to lower serum IgG levels	Early stage safety/efficacy proven in non-clinical studies
CT-G32	Obesity Treatment	Simultaneously targets 4 receptors based on GLP-1	Two-track development including an oral version

1. Secured Linker & Payload via Tech Agreement with Pinbio

- Paid KRW 1B initial upfront; total deal value of KRW 1.18T if all 15 targets are exercised
- Applying PINOT-ADC to existing candidates

2. World's First Success in Producing Antibody Biosimilar(Remsima)

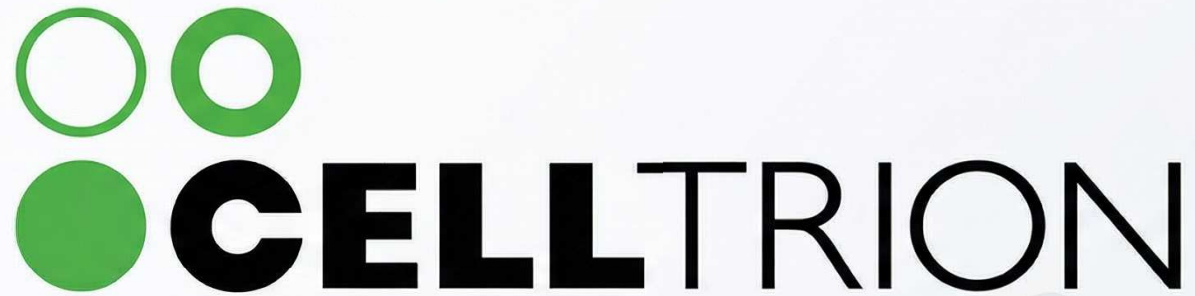

- Strong competitive edge in antibody production, the backbone of ADCs
- Process know-how compliant with FDA and EMA standards

3. Maximizing Anticancer Efficacy with Dual Payloads

- Celltrion is currently conducting dual payload research
- Dual payloads enhance efficacy by combining drugs with different mechanisms of action

Source : DART, Bio insight

Note :

4. SCM overview

4.1 Celltrion Raw / Subsidiary Materials Procurement Trends

4.2 Celltrion Global Sales Network

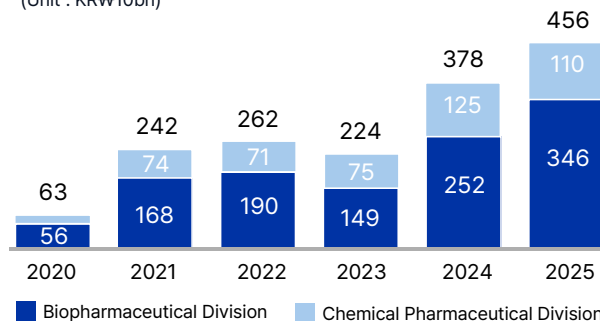

4.3 Celltrion Delivery / Contract Structure

4.1 Celltrion Raw / Subsidiary Materials Trends

Raw materials procurement has steadily increased, with bio pharmaceutical raw materials accounting for 76% of the total, serving as a key variable in the production cost structure

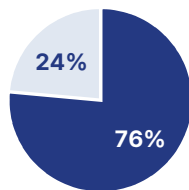

Raw Material Procurement trends

(Unit : KRW10bn)

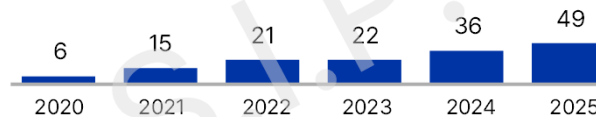

Raw Material Composition (2025)

■ Biopharmaceutical
■ Chemical Drug

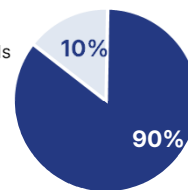

Subsidiary Material Procurement Trends

(Unit : KRW10bn)

Procurement Value Ratio (2025)

■ Raw Materials
■ Subsidiary Materials

Raw Material Procurement

- 2025 total raw material procurement reached KRW 4,560 billion
- Company's raw materials consist of "biopharmaceutical and chemical drug division" raw materials⁽¹⁾
- Biopharmaceuticals account for ~76% of Celltrion's procurement mix, with cell culture media and other key bio production materials representing the most critical input in terms of manufacturing cost

Subsidiary Material Procurement

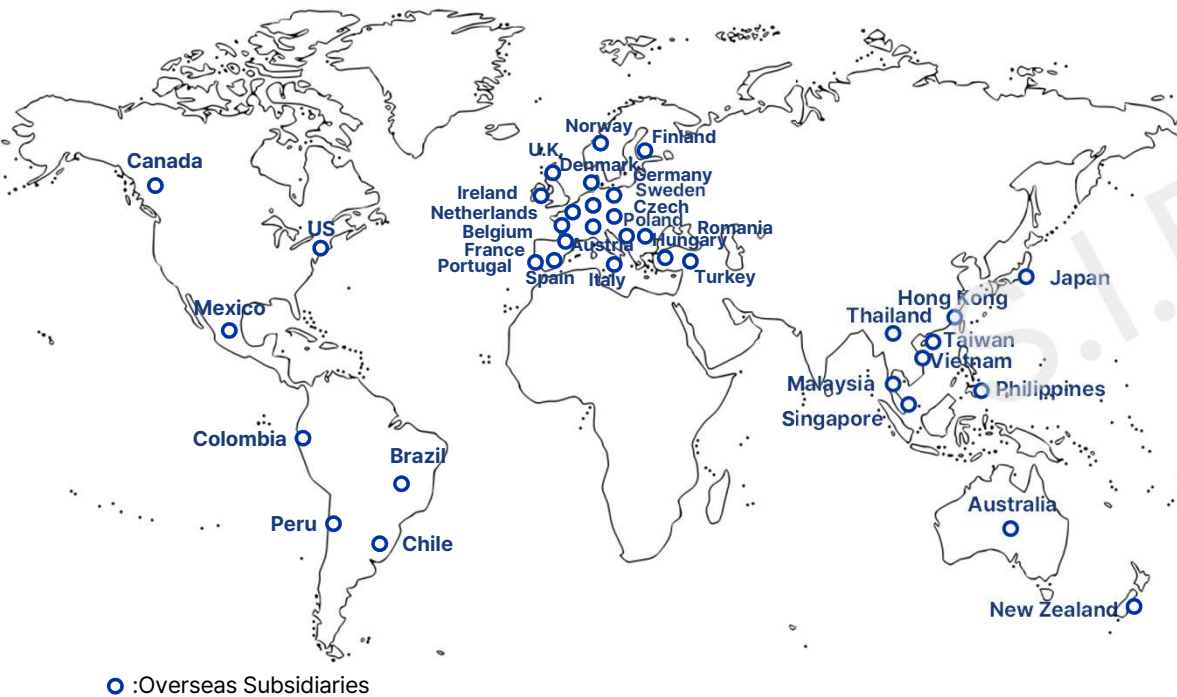

- 2025 subsidiary material procurement totaled KRW 490 billion
- Items include process-use subsidiary materials such as badges, labels, and packaging materials
- Subsidiary materials required for maintaining production processes

Source : Company IR

Note : 1) Detailed procurement items by division are not publicly disclosed; divisional procurement trends and composition are provided as a substitute

4.2 Celltrion Global Sales Network

Celltrion has established a broad global sales network underpinned by 35 overseas subsidiaries and 22 global partnerships.

	Europe	Asia	North America	Latin America	Oceania	Middle East • Africa
Overseas Subsidiaries	Spain Portugal Poland Hungary Netherlands UK Ireland Denmark Austria Italy Germany Belgium Norway France Finland Türkiye Czech Republic Romania Sweden	Vietnam Philippines Malaysia Hong Kong Thailand Singapore Japan Taiwan	USA Canada	Brazil Colombia Mexico Chile Peru	Australia New Zealand

22 Countries	10	6	2	2	1	4

Source : Company IR

Note :

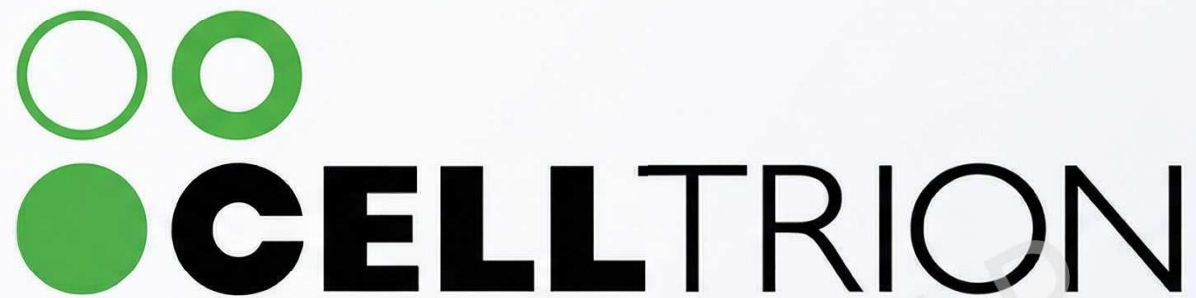

4.3 Celltrion Supply / Contract Types

Celltrion has built market-tailored delivery structures through PBM listings and bundling strategies in the U.S. and public tenders across Europe and other regions.

Contract Type	Target Market	Price Determination	Profitability Protection Strategy	Approval to Revenue Recognition Timeline
PBM⁽¹⁾. Insurer register contract	United States	- WAC benchmark set based on new drug / biosimilar status - Final price confirmed after negotiating rebate terms with PBMs	- Maximize revenue via Dual WAC⁽²⁾ strategy - Same product launched separately at different prices with separate approval - Strengthen negotiating leverage with PBMs through bundling - Contract Zymfentra + Yuflyma with the same PBM to establish a bundled sales platform	
public bidding contract	- Europe - Canada (pCPA) - Australia (PBS) - New Zealand (Pharmac)	- Win awards by bidding lower supply prices than competitors - Price fixed for the contract period after award	- In-house production⁽³⁾ reduces cost and defends against re-bid competition - Focus on profitability through high-margin in new product tenders	

Source : Company data, media releases

Note : (1) Specialty firms that manage prescription drug benefits and costs on behalf of US private insurers, employers, and government programs (Medicare/Medicaid)
 (2) Negotiate with High WAC drugs for public insurers with low rebate rates; negotiate with Low WAC drugs for private insurers with high rebate rates
 (3) Celltrion performs portions of the DP (finished drug product) process internally rather than through external CMOs
